

1. WHY DO WE NEED Cellfood®?

1.1 Introduction - Our Current Situation

Everyday - we breath in air that is polluted;

- We drink water and other liquids that are contaminated with hazardous waste, or contain chemicals and additives that are detrimental to us;
- We eat foods that are depleted of minerals; are over-refined, overcooked and have excessive fat content; and are preserved and prepared using harmful chemicals, additives and cooking processes;
- We smoke and drink alcohol excessively; and
- We exercise too little.

All of this "modern day living" loads our bodies with more **toxins and acid waste**, which slow down our metabolisms, and weaken our **immune systems**, so that they gradually become less able to protect us from **disease and aging**. Linked to the harmful effects of these **physical** factors on us, are **psychological and emotional** factors that bombard us every day. We live and work under increasingly stressful conditions, such as heavy traffic, pressurized jobs, troubled family relationships, economic uncertainty, crime, personal hardships, and so on.

Because all of this has a detrimental impact on the quality of our lives, today we need something amazing to help us deal with our modern day stressful situation. We need something that will be constantly cleaning harmful toxins and waste from our bodies, restoring cellular damage, building our bodies, strengthening our immune systems, and balancing us at our physical, electro-magnetic, biological and chemical levels.

1.2 Oxygen

When scientists analyzed the oxygen content of air bubbles trapped in ice-core drillings at the Antarctic, they found that the earth's atmosphere was comprised of between 38% and 50% oxygen not so long ago. Over the years, increasing pollution, mass destruction of the rain forests, and the reduction of other natural producers of oxygen, have decreased the level of oxygen in our atmosphere from above 38% to below 20%, especially in highly populated industrialized areas.

Because our bodies are not designed for low levels of oxygen, such as 20%, harmful toxins accumulate in our blood streams, cells, tissues, and organs. At 6% oxygen, we asphyxiate. In some major industrialized cities where the oxygen content of the air is below 16%, they do not allow their children to run around too much because this damages their respiratory systems. In more and more industrialized cities, "oxygen bars" are being opened, where people who are suffering from oxygen deficiency can go to boost their oxygen intakes.

We can live for weeks without food, for days without water; but we can only live for minutes without oxygen! As you read this material, you can live for at least another hour without having something to eat or to drink; but if you do not breathe, you will fall off your chair and die within 5 minutes.

Today, it is clear that man is functioning less and less effectively because of growing oxygen deficiency. Chronic oxygen deficiency at cellular level leads to the accumulation of harmful toxins, and metabolic and acid waste in our systems, creating a breeding ground for harmful bacteria, viruses and pathogens. This anaerobic state can then result in cellular mutation. Dr Otto Warburg, twice Nobel Laureate, stated: "*the primary cause of cancer is the replacement of normal oxygen respiration of body cells by anaerobic cell respiration.*"

Oxygen is essential because it is our main purifying agent, oxidizing toxins and waste in the body, so that the body can effectively expel them through its normal channels of elimination (such as respiration, perspiration, urination, and defecation).

We need oxygen for life, health and energy, and, because of our modern day pollution and way of living, we need something simple and effective that can supply us with more oxygen, so that our metabolisms become more aerobic and burn up this accumulating waste matter in our bodies.

Cellfood® is an amazing and unique nutritional supplement, because it supplies the body with controlled oxygen at cellular level where it is needed.

1.3 Water

Apart from oxygen, we need water to live. Unfortunately, the growing pollution in our modern day world is having an increasingly detrimental effect on our drinking water. Hazardous chemicals such as mercury, lead, arsenic, cyanide, aluminum, and phosphorus are getting into the water system every day. Other dangerous chemicals such as chlorine are added to reduce harmful microorganisms. All these elements add to the load of toxins that our bodies have to eliminate.

For cleansing and nourishing our cells, we need one-and-a-half to four liters of good quality drinking water every day, which we get from liquids and foods. Dehydration causes bodily functions to go into distress, because fewer toxins are being removed, and less oxygen and nutrients can be transported throughout the body, especially to the brain.

For good quality drinking water, we need to purify, filter or distill water before drinking it. Boiling water is not effective, because, although it kills harmful microorganisms, it leaves behind a higher concentration of pollutants. The steam that comes off the boiling water should be distilled for drinking purposes. However, distilling, purifying or filtering water can remove minerals that could be useful to the body. Therefore, apart from drinking good quality water, we must ensure that we get enough essential minerals from food or mineral supplementation.

1.4 Minerals

From the dust of the earth we were created. So, we need, in proper quantities and proportions, over 70 minerals for peak performance of every cell in our body. However, adding to our modern day problems, is the fact that our soils are becoming more and more depleted of necessary minerals. Many of our fruits and vegetables now only have less than 12 minerals out of the over 70 that we need and were present in our foods over 100 years ago.

We need minerals in our bodies for the **proper composition of the body fluids**, for the formation of blood and bone cells, and the **maintenance of healthy nerve functioning**. Lack of a single mineral in our food can cause mental and physical problems. When researchers tested the inmates of state penitentiaries in America, they found that every person there had a serious magnesium deficiency. In many countries there is major deficiency of magnesium in the soil. This certainly makes one think about our violent society!

We therefore need to become more aware of the nutritional value of certain foods, and eat the correct foods. We all know of the importance of calcium in our diets for building strong bones and teeth. However, because of the growing depletion of minerals in most of our foods, most of us probably also need some form of supplementation that will supply us with all the necessary minerals for the body's peak performance.

Cellfood® again is remarkable, because it supplies us with 78 trace elements and minerals that we need for peak performance.

1.5 Enzymes

In order for the body to draw valuable nutrients from the food that we eat, it is necessary for the food to be properly digested and metabolized.

Digestive enzymes do the work of digestion. An example is amylase, which breaks down carbohydrates. **Metabolic enzymes** then help to catalyze the various chemical reactions within the cells, such as energy production and detoxification. In this way they assist in building the body from proteins, carbohydrates and fats. An example is catalase, which breaks down hydrogen peroxide in the body, and liberates more oxygen for the body to use.

Unfortunately, once again, our modern life-styles are having a negative impact on these important enzymes. Enzymes are extremely sensitive to heat, and are destroyed by temperatures above 50 degrees Centigrade. Because we cook, and often over-cook, our foods, we need to eat more raw vegetables and fruits, and supplement our intake of enzymes.

Cellfood® supplies us with 34 enzymes, such as amylase and catalase.

1.6 Amino Acids

Finally, in order for the body to use the food that we eat, the body needs amino acids to make up necessary proteins. Strangely enough, the proteins that the body uses are not obtained directly from the food we eat. Dietary protein is first broken down into amino acids, which the body then uses to build the specific **proteins, hormones, anti-bodies and neurotransmitters** it needs.

Cellfood® supplies us with 17 amino acids for these functions.

Therefore, because today we are suffering from deficiencies of so many of these essential elements (oxygen, minerals, enzymes, and amino acids), **Cellfood®** has now become a daily requirement for healthy living.

2. WHAT IS Cellfood®?

2.1 Introduction

Cellfood® is a 21st Century highly-concentrated and super-energized liquid, which is rapidly absorbed by the body in order to start the process of cleaning, building, regenerating and balancing the body as soon as you take it.

2.2 Where does Cellfood® come from?

The genius and inventor behind **Cellfood®** is Everett Storey, twice Nobel Laureate, who worked on the American 'Manhattan Project'. This was a top-secret project; and, to this day, not much has been revealed about it. Albert Einstein credited Storey with the "**water splitting technology**" that he patented; and from his research, the hydrogen bomb was developed. Because of exposure to extreme radiation, the people on the project began to die. Everett Storey himself was affected and, by the early 1950s, he had lost 30 kg in weight.

So, Storey worked on saving his own life and giving mankind something useful. In 1956 he invented a deuterium-based product, which he called "Cell Food" or "Liquid Life". In the development of "Cell Food" Storey used the work of Dr Harold Urey, who in 1932 had discovered deuterium (the only non-radioactive isotope of hydrogen), which had subsequently been kept secret because of its role in the hydrogen bomb and as the principal fuel for space exploration.

Storey spent most of his life researching deuterium's incredible health benefits, which kept him alive until his death at the age of 74 in 1984.

2.3 What recognition has Cellfood® received?

2.3.1 Food and Drug Administration (FDA): In January 1978, Everett Storey applied for FDA registration of "CELL FOOD" (also known as Deutrosulfazyme). On the Pharmaceutical Composite Form he described it as: "*Champagne color to Amber color with passage of time, but instead of a loss in potency, there is actually a small increase each year.*" Under the section "Therapeutic Effects", he stated: *idsmaterially n the digestive process. Assists in the cleansing of upper intestines and lower intestines, and restores normal bowel functions.*

- Enables the blood stream to deliver directly to each body cell a minimum of 78 assimilable elements for complete, direct and quick nutrition.
- Provides a steady flow of both Oxygen and Hydrogen to all parts of the body, thus effecting the hitherto "impossible" achievement of simultaneous oxidation and reduction within a given cell."
- In 1985 the American Government passed the "DEUTERIUM FREEDOM ACT OF 1985" in which recognition was given to the amazing work of Everett Storey and his product, "Cell Food" (registered as Deutrosulfazyme by the American Department of Health in 1978 when Storey had applied for registration with the FDA).

The ACT, Section 2(b) Line 15 states: "Deuterium can and does form all other elements, and stands at the very core of the Universe. The ashes of Hydrogen constitute water. Heavy Hydrogen combined with water becomes 'Heavy Water' (Deuterium Oxide)." Line 25 states: "Because of Deuterium's facility to speed up the digestive process, it will aid in patients getting 'more mileage' out of the food they consume; and at the same time, reduce the toxicity in the blood stream. Deutrosulfazyme is a systemic normalizer. No wonder it is called 'LIQUID LIFE' as well as 'CELL FOOD'".

In 1995, with the change in American legislation, **Cellfood®** was classified as a nutritional supplement and not a drug/patented medicine. Until then, over \$2 million had been spent on clinical tests, and **Cellfood®** had only been available for "experimental purposes". After 1995, it was made available to the public.

2.3.2 International Hall Of Fame: In 1997, **Cellfood®** was unanimously voted by all the Inventors Clubs of America for the **1997 Advanced Technology Award** which was presented by the **International Hall of Fame** in Atlanta, U.S.A. **Cellfood®** received this award because of: 1) its unique ability to produce both nascent Oxygen and Hydrogen inside the body, resulting in the simultaneous cleansing and building of body cells and tissues; and 2) its unique ability to hold 78 elements, trace minerals and minerals in liquid colloidal suspension.

2.3.3 Japanese Report: In 1997, the Japanese Ministry of Health approved the sale of **Cellfood®** as a nutritional supplement. APETIE LINK COMPANY LIMITED of Japan tested effect on vitality levels, and its ability to deal with disease conditions, e.g. cancer. For this purpose, they used the Magnetic Resonance Analyzer, an analyzing machine, developed in U.S.A. for measuring frequencies and wave motion. It is now being used in more and more American and Japanese hospitals to diagnose the physical and mental conditions of patients. In Germany, they use a similar diagnostic machine, called the Vagar Analyzer.

Mr. Kohei Fukuda reported: "We tested **Cellfood®** with the *Magnetic Resonance Analyzer M.R.A.*, and obtained results which are unbelievable. According to the results, **Cellfood®** is an incredibly good product. The *M.R.A.* measures up to a limit of +20. Some of the readings for **Cellfood®** exceeded this limit, which is incredible."

Items tested (in no particular order), code numbers, and measuring ratios are below:

Item	Code	Ratio	Item	Code	Ratio
Natural healing power	2BD6	+20	Gall bladder	3423	+19
Circulation of blood	3CB-7	+19	Heart	3423	+20
Environmental stress	3AA1	+16	Small intestine	368E	+18
Active oxygen	38BB	+16	Spleen	34E8	+19
Essential energy	3855	+20	Stomach	338F	+20
Mental energy	3411	+17	Lungs	36AC	+10
Communication	3830	+14	Large intestine	3365	+16
Self-confidence reception	33F9	+16	Kidneys	5BA	+18
Emotional energy	30F7	+17	Bladder	36FD	+7
Integration power	33F6	+18	Cervical vertebrae	38DE	+6
Basic energy	34131	+19	Chest vertebrae	36DE	+9
Intuition	32F1	+17	Lumbar	3619	+11
Thinking and Perception	321A	+19	Cancer	3A9D	+20
Memory	3425	+18	Diabetes	35DD	+19
Vollition	31 E4	+17	Eczema	3E2F	+16
Autonomic nervous Sys.	30F8	+18	Exhaustion	35AF	+18
Dealing with Anger	3568	+16	Pain	3432	+5
Dealing with Fear	3681	+8	Insomnia	3432	+16
Liver	33D9	+19	Mental unhealth	3A92	+19

This report clearly shows that **Cellfood®** is a very balanced product, and works on many levels in the body at the same time. We publish these findings because it is important for people to know how amazing **Cellfood®** is. Remember that **Cellfood®** is not a medicine, and Nu Science Corporation and Oxywave make no medical claims or otherwise for the treatment, prevention, cure or mitigation of disease. **Cellfood®** achieves results by providing the body with all the **building blocks** that the body needs, in order for it to function more effectively.

2.3.4 Cellfood® Report: Also in 1997, Ed McCabe, known in America as "Mr. Oxygen" for his extensive research in and publications on oxygen therapies, published a report called, **Cellfood® - An Amazing Nutritional Supplement, An Amazing Sports Supplement**". (This report is available on request).

2.4 What does Cellfood® contain?

Cellfood® is a highly-concentrated super-energized colloidal liquid and registered proprietary formulation containing 78 trace elements and minerals (34 from fossilized plant taken from virgin earth, and 44 from the clean Southern Seas surrounding New Zealand, unrefined and still containing natural trace elements), combined with 34 enzymes, 17 amino acids, dissolved and nascent oxygen, suspended in a solution of Deuterium Sulfate [D2 S04]. As a complete mineral and nutritional supplement, **Cellfood®** enhances nutritional biochemical activities and brings to your body what modern living and technology is stripping away.

2.5 How pure is Cellfood®?

All the substances in **Cellfood®** are natural substances. **Cellfood®** has no alcohol, no glucose, and no substances that are on the "banned list of substances" regarding international, professional and amateur athletic associations. **Cellfood®** is made from the finest natural substances which are cryogenically (extreme cold), not chemically extracted; and are totally non-toxic. If someone is allergic to a substance, e.g. Silica, and wants to use **Cellfood®** it is highly unlikely that **Cellfood®** would cause any adverse effect; however, people with allergies should contact a Health Care Practitioner who understands **Cellfood®**.

2.6 Is Cellfood® a medicine?

Cellfood® is not a medicine, and Nu Science Corporation U.S.A. and Oxywave make no medical claims or otherwise for the treatment, prevention, cure or mitigation of disease. Therefore there are no published clinical tests, as is the case with medicines. With medicine, there is a cause and effect relationship, so Medicine A will produce Effect B, and clinical tests can prove this. Because **Cellfood®** is a nutritional supplement it works with the body's priorities, and starts working where it is most needed. Therefore, because everyone is unique, we cannot *prove* that **Cellfood®** does any *specific*

thing. We can however tell people about other people's experiences, and there are hundreds of thousands of testimonials worldwide.

We, therefore, never make any medical claims, so that we are not in violation of the present regulations of the Medicine Control Council. Hopefully, as has happened elsewhere, our legislation will change, so that **Cellfood®** may be positioned in its rightful place as one of the most incredibly advanced developments for cleansing, repairing, building, balancing and energizing the human body.

Regarding the importance of nutrition, in 500 BC, Hippocrates, the father of medicine, said: "**Let your food be your medicine, and let your medicine be your food**". Fortunately, today, more and more people are returning to this wisdom that proper nutrition is important and does have a direct relationship with health.

2.7 What is the shelf life of Cellfood®?

The shelf life is indefinite; and when 25-year-old samples were tested, they showed an improvement in the potency of the product. **Cellfood®** is prepared with an amazing formulation, and is in a very acidic solution (pH 0,3). This ensures that no harmful bacteria, pathogens, etc. can contaminate it. (See 3.4 for more information).

3. HOW DOES Cellfood® WORK?

3.1 How does my body absorb Cellfood®?

The nutrients in **Cellfood®** are in colloidal form. Colloidal particles are minute (4 - 7 nanometres in diameter), and because of the Brownian Movement Phenomenon, they take on a negative charge, and remain suspended in liquid. Because most bodily fluids (like blood and lymph) are colloidal and negatively charged, the body perceives **Cellfood®** as normal healthy body fluid, and allows the nutrients in **Cellfood®** to pass immediately through the sensitive membranes of the mouth, throat and esophagus, directly into the blood stream.

This highly efficient *Micro-activated™* Delivery System enables over 95% of the nutrients in **Cellfood®** to be rapidly absorbed and usable at cellular level. This is very high, compared to the low absorption rates of tablets at 25% and gelpcaps at 30%, because they are absorbed through the digestive system after various acids have broken them down. Furthermore, because **Cellfood®** is colloidal, the similarity between it and bodily fluids increases the bioavailability of nutrients in **Cellfood®** to every cell in the body. This increased availability of nutrients, and enhanced nutritional biochemical activity, enables the body to function more normally.

3.2 How does Cellfood® supply me with oxygen?

Cellfood® enables nascent oxygen to be generated by the **splitting of water molecules** in the body into atoms of nascent oxygen and hydrogen. Nascent means newly born; and, in biochemical terms, a newly born singlet atom of oxygen is negatively charged (O⁻). Free radicals (which many biochemists believe are the primary cause of the aging process and degenerative disease) are positively charged singlet atoms of oxygen (O⁺). The nascent oxygen atom (O⁻) is attracted to the (O⁺), forming a molecule of pure oxygen (O₂) at cellular level where it is needed, for processes such as cleansing cells, e.g. combining with a single carbon atom to form carbon dioxide (CO₂) which is expelled through the respiratory system.

3.3 How is Cellfood® different from other oxygen products?

Many oxygen products tend to **flood** the body with oxygen, often creating harmful oxygen free radicals. "The release of these reactive oxygen species results in oxidative *injury* to biologic systems such as lipids found in cell membranes, and proteins *found in blood vessels and myocardial tissues*" (Professors Ashim Ghatak and Mahesh Chandra: Complementary Medicine, Page 13, Volume 4, Number 1, 1998).

Cellfood® is totally different, because it scavenges and bonds with dangerous oxygen free radicals, supplying the body with usable oxygen in a **controlled and time-released manner**, at cellular level, only where it is needed. **Cellfood®** therefore, in no way creates free radicals. It causes free radical single atoms of oxygen to be neutralized.

Another defense mechanism against free radicals is the enzyme catalase. "Catalase *breaks down hydrogen peroxide*, a metabolic waste product in the body, and liberates oxygen for the *body* to use" (James F Balch, M.D. & Phyllis A. Balch, C.N.C. Prescription for Nutritional Healing, Page 47, 1997). **Cellfood®** contains the enzyme catalase.

If people use other oxygen products, such as ozone and stabilized oxygenated water, they should use antioxidants to minimize the free radicals that can be caused by the **flooding** effect of too much oxygen too quickly in the body. Obviously, **Cellfood®** would be ideal in this situation for normalising and balancing the system.

3.4 How does Cellfood® balance my system?

When we speak of balancing a person, we refer to all the systems, such as physical, electrical, chemical, biological, intellectual, emotional, psychological, spiritual, ethereal, metaphysical, and so on. **Cellfood®** is remarkable because it works at balancing a person on all these levels. Examples of this are: **Cellfood®** works at the physical level by providing the body with essential minerals for the constitution of the physical body; it works at the **electrical and electro-magnetic** levels by increasing the vibrational frequencies of all the body organs, boosting the immune system, and enabling the nervous system to function more effectively; it works at the **biological** level by enhancing natural biological processes, e.g. digestive and metabolic processes in the body (because of enzymatic action); and it works on the **chemical** level by supplying amino acids to the body for building protein.

These are some simple examples, which also then have significant and beneficial effects on all the other systems. Refer to the Japanese Report in 2.3.3.

Furthermore, because of the amazing proprietary formulation of **Cellfood®** although it is prepared in a very acidic solution, pH 0,3 (See 2.7), as soon as it makes contact with the enzymes in the saliva, it converts and neutralizes the fluids in the mouth into about pH 7,0. Tests with litmus paper have shown that whether one is acidic or alkaline, **Cellfood®** immediately balances and normalizes the body pH.

3.5 What happens to the nascent hydrogen?

The nascent hydrogen atoms are used by the body for many functions, such as irrigating, building and strengthening cells and organs; preventing inflammation, promoting osmosis; moistening lung surfaces for gas diffusion; and regulating body temperature. Hydrogen is essential for the processes of digestion, assimilation and elimination; and for transporting nutrients through the arteries to the brain and all body tissues. A person who weighs 80 kg has about 7 kg of hydrogen in his body.

The body normally obtains hydrogen from water, other liquids, fruits and vegetables, lack of hydrogen leads to dehydration from inside and outside the cells; and extreme dryness and abnormal nerve heat are generated in the body. Because of dehydration, moisture and fatty nutrients are not well assimilated, which could result in the brain shrinking, face furrowing, drying of mucus, cramping of tendons and nerves. A lack of hydrogen can result in conditions such as gout, muscular rheumatism, mental confusion and inadequacy, neck stiffness, skin itch, sore joints, chaotic heat fluctuations, thick and un-uniform nails, cramps in calves, extreme desire for heavy work, overpowering desire for narcotics or alcohol, inability to hold urine, predisposition for epilepsy, emaciation, ringing or buzzing in ears, weakened sense of smell, hard and fissured tongue, lack of perspiration, loss of thirst and strong preference for salty foods.

Cellfood® supplies the body with nascent hydrogen to combat these conditions

3.6 How do I take Cellfood®?

Cellfood® is a liquid concentrate, taken by mixing a number of drops in 1/4glass of distilled or filtered water. If you use ordinary tap water, the **Cellfood®** starts purifying the water and the benefit you receive from the **Cellfood®** is reduced. Boiled water should not be used. **Cellfood®** has a slightly sour lemon taste; and, if you find this unpleasant, you can then use more water or take **Cellfood®** in diluted grape or carrot juice. Some people prefer taking **Cellfood®** by placing a few drops on the palm of their hand and licking it. As explained in 3.4, the strong taste rapidly changes and neutralizes. Also see 4.3 concerning emergency use.

3.7 How much Cellfood® should I take?

How much **Cellfood®** you take depends upon your needs. Each person has unique needs, and because **Cellfood®** is a nutritional supplement, everyone responds to it in a unique manner. Most people take about 12 drops first thing every morning.

Start by taking 8 drops in the morning. If you respond initially by detoxifying, then either reduce or increase the dosage, depending on how comfortable you feel with the response you are experiencing. If you take fewer drops, the process of detoxification will slow down. If you take more drops, the process will accelerate.

If you experience no difference when taking 8 drops per day, then increase the dosage to 10, 12, 15, 20 drops, until you experience a noticeable response.

You cannot overdose on **Cellfood®**. Because it is a nutritional supplement made from natural substances, the body only uses what it needs, and eliminates the rest through the normal channels of elimination.

3.8. When should I take Cellfood®?

Cellfood® can be taken at any time. Most people take it first thing in the morning before brushing their teeth or eating. Some people who suffered from bad indigestion after eating heavy meals take it just before or just after a heavy meal, and find that it dealt with the indigestion (probably the digestive enzymes at work here).

Some people who sleep badly take it just before going to sleep, and find that they had a good night's sleep (probably the releasing of oxygen during the night made it unnecessary for the person to wake up from time to time due to oxygen starvation).

Some people take it just before playing competitive sport, for that extra boost and so that the oxygen can remove the lactic acid.

Some people take small doses three or more times a day to help them overcome a cold, or in time of distress.

3.9 How often should I take Cellfood®?

Take **Cellfood** as often as you particularly need it. Listen to your bodily requirements, and take it when you sense that you need to. Most people take **Cellfood®** once a day, first thing in the morning. When feeling run down or stressed, take it twice or three times a day. If you have to do some strenuous work or sport; or have to stay up late at night to work, or drive somewhere, or entertain guests, etc., take an extra dose of **Cellfood®** just beforehand to give you additional stamina

3.10 What happens when I take Cellfood®?

When you first take **Cellfood®** you may experience some noticeable form of **detoxification**, such as more frequent bowel movements and urination, slight nausea, mild headaches, and various discharges. The reason for this process of detoxification is as follows: As the body receives (from **Cellfood®** a constant stream of the essential building blocks that it needs to strengthen itself, the body's vital force increases. This enables the body to liquefy accumulated waste and toxins that may have been lodged in the tissues, cells and organs of the body for many years, and to eliminate them in various forms such as phlegm and mucus.

It is important to go through this detoxification, which lasts from 1 - 7 days, because, although you may feel slightly uncomfortable during the process, afterwards you experience a new level of vitality. This process of detoxification is also called a "**healing crisis**", which is a sudden and acute reaction brought on by the strengthening of the body's vital force, so that old suppressed toxins can be eliminated. Regular use of **Cellfood®** will assist the body to strengthen more and more, and eliminate more and more old accumulated toxins.

Always tell people that **Cellfood®** can trigger off some form of elimination of old accumulated toxins. If, however, the person experiencing this feels unacceptably uncomfortable about this temporary process, the person should seek advice from a Health Practitioner who is knowledgeable about detoxification processes. It would be unfortunate if someone stops taking **Cellfood®** because the person was not prepared to go through some form of detoxification.

Sharing Hering's Law of Cure with these people can help them to persevere, and is very important in understanding the difference between "**healing and disease**". The famous homeopath, Constantine Hering, made a clear distinction between the symptoms of a disease crisis and those of a **healing crisis**. Unfortunately, due to ignorance, we confuse a healing process with a disease process; and suppress it with medication. This only makes the body weaker and more vulnerable to disease.

Hering's Law of Cure states: "**All cure starts from within the body towards outer locations, from a mental to a physical level, from the head downwards to the rest of the body, from vital organs to less important organs, and in the reverse order that the symptoms appeared throughout the person's life.**"

When a person experiences a healing crisis, it is essential to give this process lots of assistance in order to promote the rapid elimination of any toxins and disease elements that are manifesting themselves as phlegm, catarrh, mucus, running nose, enlarged tonsils, fever, etc. This is nature's way of righting some internal wrong. It is also known as the "reversal process". Whatever has been suppressed in the body for years (e.g. some childhood illness that was suppressed with medication liquefies and is eliminated through the normal elimination channels. As the body gets healthier, the vital force may, unexpectedly, trigger off another cleansing. You may go through a number of healing crises over a period of time. Each time, stored toxins are eliminated, and you experience new levels of vitality.

If someone experiences no response or detoxification after taking **Cellfood®** it is usually because it is working in a "silent manner". See 3.11 for more information.

3.11 What happens if I get no results?

Sometimes a person is unaware of the "work" that **Cellfood®** is facilitating at deep cellular levels, where there is a priority in the body. Because you may not be consciously aware of what is happening, you may think that **Cellfood®** is not working for you. People, who at first reported "no results" from taking **Cellfood®** later, after having undergone regular medical check-ups, reported that their cholesterol and blood pressure levels had dropped significantly. There are similar accounts regarding the normalization of uric acid and blood sugar levels. Another case where **Cellfood®** has worked at deep cellular levels has been the improving of the immune system, without the user of **Cellfood®** being aware of the process.

Because **Cellfood®** works in a natural way at normalizing and balancing the body, we must encourage users to continue taking **Cellfood®** and become more "tuned in" to the less noticeable but more significant changes in their bodies. A sure way of becoming aware of what **Cellfood®** is achieving is demonstrated when one examines the comparative results of medical check-ups before and after taking **Cellfood®**. This gives clear evidence that **Cellfood®** has been normalizing and balancing all bodily systems, and facilitating renewal at deep cellular levels.

The Japanese Report (see 2.3.3) shows that **Cellfood®** works on many levels in the body at the same time. Because **Cellfood®** works in each individual according to that person's priorities, it often works in a "silent manner" on some priority that may be outside of that person's conscious awareness, at that specific moment in time.

In spite of explaining that **Cellfood®** works on priorities at deep cellular levels, and works wonders at normalizing and balancing all our systems, some people still insist that **Cellfood®** does not get results and therefore does not work. In these cases we recommend that you check the following:

- 1) Enquire where the person is storing the bottle of **Cellfood®**. Some people have stored the bottle on a microwave oven or in a handbag next to a cellular phone. In these cases the electrical fields have probably reduced the efficacy of the **Cellfood®**. Because of the ionic bonding in **Cellfood®** it must be kept away from any electrical appliance which emits an electro-magnetic field.
- 2) Enquire how the person is taking **Cellfood®**. Some people have taken it in coffee at breakfast. For best results, **Cellfood®** should be taken in distilled water, about 30 minutes before eating.
- 3) Enquire about the dosage the person is using. Some people use 8 drops daily with no apparent benefit. As previously explained, **Cellfood®** is working at some priority that may not be apparent to the user; and, because of the small dosage, there is not enough in that particular person's system for work at noticeable levels to take place. Suggest that the person increase the dosage (e.g. extra 2 drops until benefits are noticeable. At a later stage, the person can then reduce the dosage to a maintenance level of 8 drops daily.

Finally, suggest that the skeptical person should simply stop taking **Cellfood®** and notice if there is any change. Often, when a person suddenly stops taking **Cellfood®** the person then becomes aware of how **Cellfood®** had been incrementally assisting the person with more energy and alertness, etc.

3.12 Who can benefit from Cellfood®?

In one word, "EVERYONE" can benefit by taking **Cellfood®**

As **Cellfood®** has become more well known for supplying us with the building blocks we need to improve our quality of life, some prominent people in government, business, sports, etc. are benefiting by taking **Cellfood®**. Some are prepared to speak openly about their positive experiences with the product.

Mrs. Winnie Mandela appeared on the SABC TV3 "Options" program in September 1998, and said that **Cellfood®** had helped her to deal with the stress in her life. It has helped her to improve her health and her attitude towards her family members and other people in South Africa.

Mr. Grenville Scullard, also appeared on the SABC TV3 "Options" program, and said that **Cellfood®** had helped his performance. As a gold medal cyclist who holds three South African records, Grenville broke one of his own national records as the fastest track cyclist in South Africa after taking **Cellfood®** for a few weeks.

Mr. Daniel Radebe, the fastest short distance marathon runner in South Africa, has been benefiting from taking **Cellfood®** for several months now.

Top sports people "testing" **Cellfood®** report that they feel more alert, play a better game (e.g. tennis), are less out of breath, recover more quickly after sports. (**Cellfood®** working on the lactic acid), and generally feel more positive.

On the other end of the health spectrum, those who do not eat properly, smoke and drink alcohol excessively, do not exercise, have no get-up-and-go in the morning, always feel tired and run down, can't get a good night's sleep, want more vitality and energy, and generally want more out of life, would greatly benefit by taking **Cellfood®**. With more oxygen and minerals in their systems, children, students, teachers, and workers (especially night shift), have reported back that the

increase in their alertness level and attention span, as well as their ability to deal with stress and pressure, has amazed them.

Many doctors are advising their patients to take **Cellfood®** as supplementation to other medications, remedies or supplements they may be taking. **Cellfood®** makes the other preparations more bio-available in the body. There are thousands of testimonials worldwide about the benefits of taking **Cellfood®**. People who seem to have an immediate response from using **Cellfood®** are those who have been suffering from arthritis. Some have reported the disappearance of pain from their joints within a few days of taking **Cellfood®** and later reported that their swollen joints were gradually reducing in size.

People report that a "cold" only stays for a day or two compared to previously, before using **Cellfood®** when it would linger on for over a week. Remember, **Cellfood®** is not a medicine; it merely provides the body with all the building blocks in order for it to function more effectively. Because this often results in a stronger immune system, a previously sick person now has the strength to resist the disease, and so begins to heal. We cannot claim that **Cellfood®** cured the person. It triggered off a process, and assisted the person to strengthen sufficiently in order to fight and resist the disease

4. WHAT ELSE CAN Cellfood® DO FOR ME?

4.1 The Immune System

Apart from assisting with the cleansing of cells, **Cellfood®** raises the **frequencies** of all organs, making them more resistant to the lower frequencies of viruses, bacteria, parasites, etc. When the "water splitting phenomenon" takes place, the nascent hydrogen atoms contain enormous supplies of positively-charged electromagnetic energy. One drop of **Cellfood®** produces 77,000 angstroms of energy. The body is energized by this hydrogen. In 1991, Dr Aristo Vojdani, Vice-President of Immunosciences Laboratories Incorporated U.S.A. reported, "**significant increases in T-cells with increasing dosages of Cellfood®**". This means that as the immune system is being progressively boosted, it makes the body more capable of dealing with micro-organisms that could be detrimental to one's health.

Once again, it is important to realize that **Cellfood®** itself is not directly combating disease. The body has been magnificently designed by Our Creator to do that. **Cellfood®** is amazing because it provides the body with the essential building blocks that it needs to effectively perform its required and normal functions.

4.2 In conjunction with other products

Cellfood® can be used in conjunction with other nutritional supplements or medicines, because it increases the bioavailability of other substances so that the body more effectively utilizes them. That is why people who are on heavy medication and who take **Cellfood®** must be regularly monitored by their Health Practitioners. Within a few weeks or months the need for medication can often be gradually decreased as the body cleanses, and gets stronger and more balanced.

4.3 Emergency use

In an emergency, such as oxygen deficiency, a car accident, coma, heart attack, stroke, shock, etc., a couple of drops of **Cellfood®** can be put onto the person's palm of the hand to be licked, or put directly on or under the person's tongue.

4.4 Energy production: Adenosine Triphosphate (ATP)

In his report on **Cellfood®** Ed McCabe says that plenty of oxygen makes aerobic ATP. Each cell has an engine called the mitochondria (structures occurring in varying numbers in the cytoplasm of the cell). ATP is the engine's fuel used for all the energy-requiring processes within the cell. Our cells do not use the nutrients we consume for their immediate supply of energy; instead, when needed, they prepare an energy-rich compound called ATP. ATP consists of one molecule of adenine and ribose (called adenosine) combined with three phosphates and oxygen atoms. A considerable amount of chemical energy is stored in the ATP molecule. When the outermost bond of the ATP molecule is broken, it releases energy equivalent to 7,000 calories. Although ATP serves as the energy current for all cells, only about 3 ounces of ATP are stored in the body at any one time. This would provide only enough energy to sustain strenuous activity for 5 to 8 seconds. Therefore our cells to provide a continuous supply of energy are constantly synthesizing ATP. This means that the more oxygen-enriched the body is, the more ATP the cells can produce. So, **Cellfood®** is wonderful for the production of ATP.

4.5 Highlighting weaknesses

A few people have reported experiencing sensitivity on their teeth when taking **Cellfood®**. This could be because **Cellfood®** often highlights weaknesses in the body and starts assisting the body at cleansing, restoring, and balancing that part of the body. Sensitivity on the teeth could be as a result of thin enamel on the teeth, and a general lack of calcium in the body. It is good that this is highlighted now and not later in life, when one possibly falls and breaks a limb, only then to be told that one has a calcium deficiency in the body. Those who experience sensitivity on their teeth should consult with a Health Practitioner to find out if they should be taking some additional calcium and magnesium tissue salts.

Someone reported persistent headaches after taking **Cellfood®** and found out after a brain scan that some blood vessels in the brain area were blocked because of cholesterol. **Cellfood®** had started the process of cleansing which highlighted the discomfort. By continuing with **Cellfood®** the headaches eased and then disappeared, and the blockages were cleared. If in doubt, always consult with a Health Practitioner who understands the processes of cleansing and detoxification

4.6 Topical applications and other skin care products

Cellfood® can be applied externally on the skin; either undiluted on bruises, warts, moles, corns, scars, etc.; or diluted (1: 20 parts distilled water) on open wounds and for sinus problems; and (1: 30 parts distilled water) for eye infections.

Cellfood® has been combined with excellent skin care ingredients to produce some superior skin care products, called **Cellskin™ Plus**, **Cellskin™ Mist**, and **Cellskin™ Bath**. Please ask us to tell you more about these excellent skin care products.

4.7 Animals and Plants

There are many reported cases of animals benefiting from **Cellfood®**. Everett Storey himself put a couple of drops of **Cellfood®** into the bowl of water for his dogs. He withdrew all other sources of water. He did this for four days. Thereafter, he supplied his dogs with two bowls of water, one with **Cellfood®** and one without. The dogs always went to the bowl with **Cellfood®** added, and lived very healthy lives.

One individual implemented what Everett Storey had said in 1978 about **Cellfood®** being excellent for plants. "I experimented with **Cellfood®** on lettuce plants. I planted 100 lettuces in 20-liter plastic bags filled with organic compost and soil. I used only borehole water, and no artificial fertilizers or insecticides were used. Every Monday I put 50 drops of **Cellfood®** into 12 liters of water, and watered 50 plants. Every Wednesday and Friday, I watered these plants with water only. For the other 50 plants, I watered them on Mondays, Wednesdays and Fridays with water only. After 60 days, the plants that had received **Cellfood®** were big, crispy, healthy and ready for eating. The other 50 plants only formed heads after 85 days. It usually takes 105 days for a lettuce to mature."

For cut flowers putting a few drops of **Cellfood®** into the water has doubled the normal period flowers remain fresh

CONCLUSION

It is clear that until we restore our environment to an atmosphere with about 38 percent oxygen in it, water supplies that are unpolluted and crystal clear, and soil balanced and productive with at least 80 elements and minerals in it, and eat foods with sufficient enzymes and amino acids, we all need to use a nutritional supplement such as **Cellfood®** on a daily basis.

By taking **Cellfood®** regularly, you are providing your body with the essential building blocks for the daily cleansing, nourishing, restoring, building and balancing of your body. In this way, you are making a meaningful investment in yourself, ensuring prevention of disease, and quick healing if you do get ill or hurt, as well as improving your quality of life at every level.

Cellfood® is manufactured by Nu Science Corporation U.S.A. in an F.D.A. licensed laboratory. OxyWave distributes **Cellfood®** and other products, and is a family owned and operated company dedicated to the promotion of environmentally "smart" products to enhance our overall health, both externally and internally. Please visit our web site at: www.oxywave.com, e-mail us at: info@oxywave.com, or call us at 888-345-5587
